

DISCDYEADDICT'S DISC DYE GUIDES

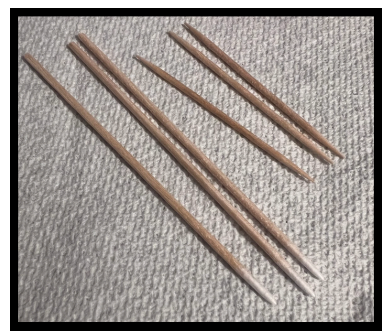

GLUE MASK

SUPPLIES

1

- Premium Plastic Disc
- Water & Dish Soap to wash disc
- White Washable School Glue (dries clear)
- Toothpicks
 - regular tooth picks are fine...
 - ... or I like the longer ones with a cotton tip ... they seem to push the glue around a little better

WASH THE DISC

2

- Always wash a disc before dyeing or masking
- Remove any surface film or other "gunk" that may affect your final product
- Warm water, dish soap and wash carefully so you don't remove the stamp by just friction

3

APPLY GLUE

- Apply a small amount of glue to the area to be protected from dye
- Use a toothpick to carefully push and spread the glue

4

THIN LAYER

- The goal is a layer that covers the area, but not too thick.
- It needs to dry consistently and smoothly so that a spin dye or other method does not drag/tear your glue off the disc

5

HEAT OR WAIT

- If you have a heat lamp, you can use it carefully to speed up the drying time
- Otherwise, wait for the glue to dry clear
- The better you are at a thin layer, the quicker it will dry

6

TEST....SURE?

- After you're SURE that it's dry, run your finger carefully over the glue
- Press a little hard on it to see if it drags or rips the surface
- If it rips, apply a dot of glue and smooth out, then let dry

DISCDYEADDICT'S DISC DYE GUIDES

GLUE MASK (continued)

FINISHED

7

- Now dry, you can spin dye over the top and not worry about affecting the stamp
- You can also use a glue bed or other methods of course...
- BUT make sure you don't use heat...as it can cause your glue mask to dissolve
