

## SPINYANG

### SUPPLIES

- Premium Plastic Disc - preferably white
  - Water & Dish Soap to wash disc
  - Prochem Dye (already mixed)
  - Vinyl Transfer Paper & surface to cut it on
  - Blade/exacto knife to cut
  - Mini Disc or method to draw 4.5 inch circle
  - Turntable/record player to spin the disc
  - Black Sharpie
  - Q-Tips
  - Paper Towels for spills and resting QTips
  - Optional: School Glue, Toothpick for glue mask spreading, Acetone for mistake-quick-fixing

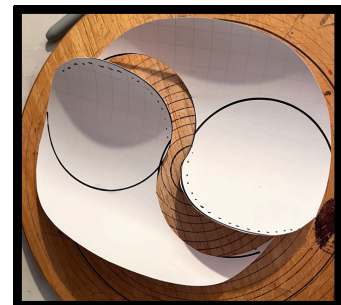

### BIG CIRCLE

- Trace outside edge of disc onto the paper side (not plastic side) of the paper
  - Cut the circle just inside the traced line (so it won't overlap the edges of your disc on the turntable)

3

### CUT THE YIN (OR YANG, YOUR CHOICE)

- Take a mini-marker or other circular thing and make 2 circles that meet in the exact center of the bigger cutout
  - Cut the yin/yang shapes out, making sure to have a smooth/clean edge to prevent dye bleeding under later

### PLACE YIN ON DISC

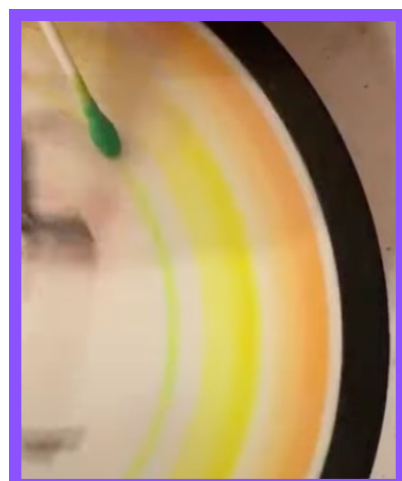

- Peel and place cutout on disc (cover outside edge & any stamp you want to protect)
  - Smooth it out as best you can
  - Use glue masking for other stamp areas that need protection

5

### SPIN DYE TIME

- Using turntable, apply thin layers of dye with a Q-Tip
  - Make sure Q-Tip does not have too much for the first touch on the disc, or it may puddle

### SPIN DYE TIPS

- Apply several **thin** layers until you get a feel for it
  - You can always add more, but cannot take dye off
  - Colors that touch **WILL** mix
  - Use new Q-Tips when it gets another color on it

# DISCDYEADDICT'S DISC DYE GUIDES

## SPINYANG (continued)

### SHARPIE...FINE

7

- If you want to apply a fine black line to the edges of your spun colors, use it **carefully**
- It will mix with any dye that hasn't absorbed yet, and may bleed if there's still acetone that hasn't "burned" off yet

### CURVED BORDER?

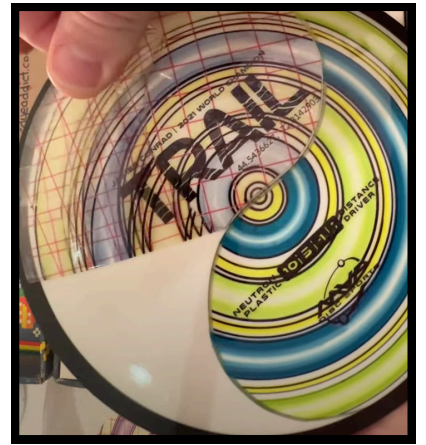

8

- If you want a border on the inside edge of the yin shape, use a QTip that has just a **tiny** bit of dye still on it....
- Run the QTip carefully along the curved edge of the shape, which will blur the existing dye and create a border effect
- (or sharpie would work)

9

### PATIENCE

- Let the disc dry/absorb
- 18-24 hours without heat
- 2-4 hours with heat
- You've worked so hard, don't let your impatience ruin the disc now!
- Peel the vinyl off carefully

### YIN AND YANG

?

- To dye the other half, repeat the whole process using another cutout vinyl piece **OR** glue mask the entire other side (just make sure it's absorbed first)
- Sometimes too hard to place the other shape in the **EXACT** position...glue mask might be easier (or leave it blank)

10

### RINSE & FINISH

- When finished, and you're **SURE** that the dye is set/absorbed, wash it gently to ensure no residual dye is left to stain the thrower's hand
